To Farmers and Returned Soldiers And To All Others Who Are Desirous Of Going On To Land

We desire to give notice that we have for sale a large area of land in the three prairie provinces, a considerable portion of which is within the forty-mile radius of the City of Winnipeg, and which can be had on very easy terms and at a comparatively low price. While the most of these lands are unimproved, we have, nevertheless, splendid bargains among Estates' properties which are improved and which are excellent buying, and must be sold to close out these Estates.

A WORD TO THE WISE

The editors hope you enjoy reading The Guide. This year will see many important improvements made. We can promise our old subscribers many new, unusual and interesting features, a constant bettering of our service.

During the past few years Canada has seen the trying problems that will have resulted from the great war. The equitable solution of the reconstruction difficulties will determine the status of western agriculture—will it flourish, or practice will be forced with permanent losses in the industry killed by placing upon it an unequal burden of the cost of doing that has been required. Every farmer should keep posted. The Guide should be a weekly visitor in every farm home during this period.

Back numbers of The Guide cannot be supplied. Send in your renewal promptly to avoid missing a single issue.

The Guide has a label on The Guide showing to what date your subscription is paid. No other receipt is issued.

Subscriptions should be made direct to The Guide, either by registered letter, postal note, postal bill, or express money order.

THE GRAIN GROWERS' GUIDE

"Equal Rights to All and Special Privileges to None."
A Weekly Journal for Progressive Farmers.

The Guide is also largely owned and controlled by the grain and farmers—entirely independent and not one dollar of political capital, or special interest money is invested in it.

Published under the names and employed as the official organ of the Manitoba Grain Growers' Association, the Saskatchewan Grain Growers' Association, and the United Farmers of Alberta.

GEORGE F. SWIFMAN, Editor and Manager.

Associate Editors: W. J. HEALY, R. D. COLQUHOUN, E. A. LLOYD and MARY P. MCALLUM.

Authorized by the Postmaster General, Ottawa, Canada, for transmission at second class mail matter. Published weekly at 280 Victoria St., Winnipeg, Man.

Vol. XII February 19, 1919. No. 7.

SUBSCRIPTIONS AND ADVERTISING

Published every Wednesday. Subscription in the British Empire, \$1.50 per year, prepaid Winnipeg city, which is \$2.00 per year. Foreign and United States subscriptions, \$2.50 per year. Single copies, 5 cents.

ADVERTISING RATES

Commercial Display: 50c. per line and 20c. per space line. Classified: 7c. per word per week.

No account for time or space on any class of advertising. All changes of copy and matter must reach us eight days in advance of date of publication in order to be considered. We reserve, through careful enquiry, that every advertisement in The Guide is signed by trustworthy persons. We will take it as a favor if any of our readers will advise us promptly should they have any reason to doubt the reliability of any person or firm who advertises in The Guide.

Applications for Seed Grain

Applications for seed grain in organized districts, either patented or unpatented land, should be made to the Secretary of the Municipality. The Municipality, after receiving deposits from farmers applying for seed, will place these orders either locally or with the Dominion Seed Purchasing Commission. The farmers residing in unorganized districts, whether patented or unpatented land, should send their orders direct to the office of the Woods and Road Commission of the province in which they reside, who will take the applications and place the orders.

How to Obtain Credit to Purchase Seed Grain

If the land is patented and mortgaged, applications should be made to the Loan Company holding such mortgage the security of such farmers will already been made with the mortgage companies whereby they have agreed to supply seed to deserving mortgage owners.

If the land is patented and mortgaged the security of such farmers will likely be sufficiently attractive and the local bank will advance cash to buy seed requirements. If not, it might be possible to negotiate with one of the loan companies who make it their business to loan money on farm lands.

If the land is unpatented, application should be made to the Woods and Road Branch of the Provincial Department of Agriculture for blank seed forms to be filled in before a Commissioner for Oaths and returned to the provincial office.

If you cannot buy seed grain in your own district and you do not find it convenient to order through the Secretary of the Municipality, you might club your order with your neighbor's, so as to make up a carload, and send your application direct to the Dominion Seed Purchasing Commission, Post Office Building, Regina, Sask. All orders for seed are filled by this Commission and shipped with eight-draft attached to the bill of lading.—Advertisement.

Norman Lambert, secretary of the Canadian Council of Agriculturists, is at present in Europe watching developments in connection with the peace conference. Mr. Lambert will contribute a series of letters giving first-hand impressions of the situation as it develops. The first of these appears in this issue.

The argument that a reduction of the tariff would be fatal to small industries is consistently advanced by protectionists. Protection has certainly been fatal to a large number of them. Read what Frederick McKenzie, vice-president of the Canadian Council of Agriculturists, has to say on the subject under the heading "Small Manufacturers Crimped."

Two weeks ago The Guide published an article by W. C. McKillop, on rotations. This was based on results obtained on the Brandon Experimental Farm, and was, we are sure, of great value to those farming under conditions approximating those of central Manitoba. However, the West is so big that farm practices recommended for one set of conditions may not be applicable in all districts. At the Lacombe, Alta., Experimental Farm, for instance, the inclusion of cereals in the rotation has not been found practicable. In northern sections a larger proportion of coarse grains are grown than on the open prairie. For such strictly mixed farming sections G. H. Hutton, until recently superintendent of the Experimental Farm at Lacombe, has done valuable work on rotations. His recommendations along this line are found on page 9.

L. E. Heron, ably edits the Nebraska Union Farmer, the official organ of the organized farmers of that state. In this issue appears the first of two articles on the farmers' movement with which he is identified. Mr. Heron is a close student of the movement in Western Canada. His articles will give Guide readers a good idea of the work that is being accomplished by their brother farmers in the South-western States.

Political Action was decided upon by both the Manitoba and Edmonton conventions. Suggestions for making the decision effective in the field of Dominion legislation are given in "Making Marked Ballots Count," by Colin

H. Munnell, who has had much to do in bringing the matter of political action to the fore in Manitoba.

"Loyalty to the Farmers' Movement" is the subject of an interesting article on the Farm Women's Club page, by Mrs. Parley, president of the U.F.W.A. It applies as well to the men members of the various associations as well as women. If you want to know what that loyalty means, read this interesting article.

The Resolution on Nursing, which the U.F.W.A. passed to alleviate the lack of medical facilities in remote rural sections of our prairie country appears on the Country-woman page of this issue. The attitude of the Graduate Nurses Association towards the need that exists today for trained women in midwifery is given in their opposition to the resolution passed by the U.F.W.A.

A good type of work-bench for the farmer is described and illustrated on page 41 of this issue. It is simple in construction and very useful in the workshop. A simple bag holder is described on page 15.

Dr. E. S. Wood announces that he has consented to supply the pulpit of Broadway Church, Toronto, March to June, inclusive. His course after that, he states, is indefinite. He will still continue his articles on "The Deeper Life" each week in The Guide.

Farmers should address their business correspondence to the firm with which they are doing business and not to individual employees or members of the firm. A case came to hand recently in which a farmer complained of not receiving repairs for his threshing machine of which he was in urgent need. It appeared on investigation that the farmer's letter had been addressed personally to the manager of the firm, and as the manager was away on holiday the letter had remained unopened on his desk.

If a farmer wishes to have his business attended to by some particular man of the firm, he should simply mark on the top of his letter, inside, "Attention Mr. Brown & Co." When the letter is opened, if the party named is in the office it will go to him for his attention. If he happens to be away, however, the matter would receive the attention of some other member of the firm, pending the return of the party named.

ASK THE GUIDE

For Advertising Department of The Guide, like its Editorial Department, and Seed Department, is always at its service to our subscribers. One way the Advertising Department can be of use to you is in supplying information concerning the names and addresses of advertisers—either of those advertisers whose ads. you have seen and forgotten or the addresses where you can get supplies that may have been advertised. Your requests for information will receive our prompt attention.

More than
a Hundred
Pages

There is ever-growing with the hundred and one things that are found necessary for the farmer to buy from day to day, and all at prices, quality considered, that will prove most satisfying.

Guaranteed Harness

With the knowledge that only the highest of leathers and the best of materials and fittings are used in the construction of U.G.G. Harness, we can safely make such a guarantee.

Farm Team Flow Harness

The above illustration shows our Farm Team Flow Harness, which is one of the best of its kind, and a remarkable value at the price. It is heavy, and unusually well-made of best materials and reliable workmanship. Price: \$10.00. Winnipeg, 1919. Catalogue, \$1.00. Postage, \$0.10.

OUR NEW 1919 CATALOGUE gives a detailed description of the full line of harnesses, including spring harness, and other harnesses and leather harnesses.

U.G.G. Potato Planter

The "Splitter" Potato Planter sold by the United Grain Growers Limited is known in every potato-growing district on the continent. It will not only plant your potatoes, but it will plant them in a way that will give you the biggest possible yield.

If you are not familiar with any similar machine, you must admit to be without a reliable planter. It saves time and labor, handles all sizes of potatoes, and will plant in any soil. It is sturdy, reliable, and will give reliable service for many years.

Price, with working disc, hopper and planter, \$20.00. Winnipeg, 1919. Catalogue, \$1.00. Postage, \$0.10.

OUR NEW 1919 CATALOGUE also shows the U.G.G. Potato Planter, and other potato planting machines. A copy of this Catalogue is sent free to every farmer who sends us a few lines to let us know you are interested in it.

Seed Drills

The Only Drill with Auto-
matic Power Lift and
Power Pressure

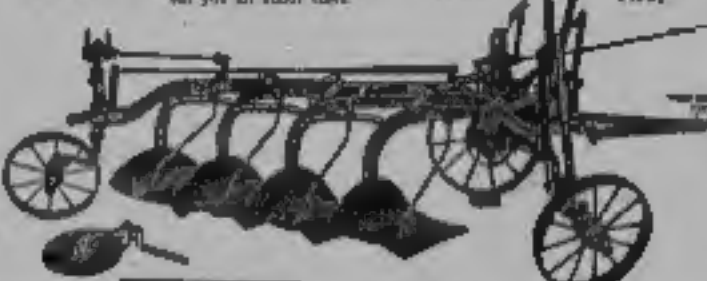

The only Drill with Automatic Power Lift and Power Pressure—the greatest improvement made in grain drills during the past quarter-century. Farmers will appreciate this time and labor-saving device, which is only one of many features fully described and beautifully illustrated in colors in the new U.G.G. 1919 Catalogue which is now ready for distribution. You will also find in this Catalogue a table of prices on these Seed Drills and attachments that prove the advantage of co-operation with the U.G.G. Your copy of the Catalogue is ready. Fill out the Coupon and mail it today.

U.G.G. Light Tractor Plows

Made in a variety of sizes and shown in our Tractor of any kind or horsepower. Let the U.G.G. 1919 Catalogue tell you all about them.

Our 1919 Catalogue shows a line of Tractor Plows and Bulky Plows.

Going to Build?

The Struggle

Indications all point to a political and economic struggle in Canada in the very near future. The organized farmers have demanded that the economic burden which they are forced to carry for the benefit of the protected manufacturers must be lifted from their shoulders. The organized manufacturers have replied with specious arguments, but their reply means that they do not propose to yield one iota on the tariff. They have enjoyed the tariff for many years at the expense of the farmers and other consumers and they propose to keep on enjoying it. The issue is very clearly joined.

On the one side there will not be chiefly the organized farmers representing the agricultural industry of Canada. The farmers in their organizations number approximately 120,000 in the four provinces. Their chief strength is economic necessity and the moral soundness of their cause. Politically, the farmers have never in the past shown any great wisdom. They have allowed themselves to be divided between the Grit and Tory parties while the privileged interests have controlled both parties and have, therefore, been able to take toll off of the farmer no matter how he voted. The farmers, through their organizations, have progressed rapidly and are less bound by party ties than ever in the past. In Manitoba and Alberta they have definitely declared for political action.

On the other side in the struggle will be the organized manufacturers supported very largely by the big financial interests. In number their organization is very small, but they have money in millions at their disposal. Reports are to the effect that the protected interests are organizing with more thoroughness than ever before. They are engaging the best brains in Canada to carry on their campaign. They are endeavoring to educate the people of Canada and show them the value and benefit of the protective tariff. This is quite a legitimate effort, but the manufacturers are not depending solely upon their educational work. They have already a good grip on the political situation. In the present government at Ottawa, the majority of the cabinet are high protectionists and undoubtedly the government will be supported by the manufacturers' campaign funds. There will be a tremendous effort made to divide the farmers between the two old parties and to trim them as has been done so successfully in the past.

There is only one possible hope for the farmers; they must "hang together or hang apart." If the farmers have sufficient ethical sense to present a united front and shoulder to shoulder they can win out against all the money the protected interests can produce. But the farmers must forget that they are or have been Grits or Tories; they must nominate and elect their own candidates, who can be depended upon to fight for a square deal. The situation is now clear before the farmers. It is up to them to decide. They can take it easy and let the protected interests run the country, or they can join forces in the fight and try to save themselves and their families from the grasp of the privileged interests.

For Dominion-wide Prohibition

At their recent annual convention in Brandon, the Manitoba Grain Growers put themselves on record with so uncertain sound in favor of Dominion legislation designed to provide as soon as possible full prohibition of the manufacture, importation and sale of

intoxicants in Canada. The liquor interests in our own country are immensely powerful; they have organized for a determined effort, in which money will not be spared, to withstand the sweep of prohibition legislation. The victory of the nation-wide prohibition in the United States last week is the greatest defeat the liquor interests have thus far suffered in any country.

There should be stringent Dominion legislation of the character demanded at the Brandon convention prohibiting the manufacturing of intoxicants in Canada and closing our country's frontiers, including the ocean gateways, against this deadly enemy of the welfare of the Canadian people. Only in this way can the peace and safety of our country be safeguarded effectually against the misery and human wreckage caused by intoxicants.

The liquor trade still having a legalized standing in Quebec, that province is a base of supplies from which intoxicants are illicitly carried into the other provinces, which have prohibition on their statute books. The hope that the legislation of the Dominion Parliament outlawing such shipments would make an end of that evil has not been realized.

A prohibitory law was passed at the last session of the Quebec Legislature, to come into operation on May 1 next. The liquor interests have mobilized all their power against its coming into operation. The correspondent of the Montreal Star at the capital of that province writes that from information gathered in Quebec government circles it may be counted upon as certain that the province will not be made "bone dry" on May 1. "Men invariably consulted on any big question," he adds, "hold the view that the law will be modified." He says further that "the fighting class of the wets have big influential backing." Of course they have. There are immense fortunes to be made out of intoxicants.

Dominion prohibition is the only way of dealing adequately with this evil. Write to your member of parliament and urge him to give his support to the resolution adopted by the convention at Brandon.

The Prussian Spirit

The signs of the times indicate that the Prussian spirit is not by any means confined to Germany. There are evidences of it right here in Canada. Two weeks ago the executive committee of the Canadian Manufacturers' Association, at Toronto, issued an official reply to the tariff demands of the Farmers' Platform. The aim and substance of their declaration was against any reduction of the tariff. They are determined to keep the tariff just as high as possible, as long as they have the power to do so. They are depending upon their great wealth and their influence in parliament to maintain the protective tariff.

The Canadian Industrial Reconstruction Association, of which Sir John Williams is the president and chief spokesman, is a Canadian Manufacturers' Association organization. Its purpose is to educate public opinion in favor of protection, and it is spending barrels of money in its campaign. This is a most legitimate method of propaganda work. If by open and above board methods, the protectionists can convince the Canadian people that protective tariff is a good thing, it is quite legitimate for them to do so.

But in the last issue of Industrial Canada, official organ of the Canadian Manufactur-

ers' Association, owned and published by the C.M.A., the true policy of "frightfulness" is exposed. Prominently displayed in the January issue of Industrial Canada, the editor publishes the following statement:—

Supporting Trouble-making Publications

If advertisers persist in "bustling," the net effect of which is undermining the whole fabric of business expatriotic and disloyal and to be credited with business guile and if unworthy, inevitably making publications gain the head will make enough converts to the whole fabric of business."

This statement, which is unproved by the executive committee of the Canadian Manufacturers' Association, true Prussian policy of "frightfulness" simply means that Canadian men who put their advertisements in the Growers' Guide, or other papers, support the organized farmers in their fight for lower tariff, are branded as "unpatriotic and disloyal." In other words, a man at the head of the C.M.A. dares to attempt to kill off, or strangle the dares to oppose them. They are going to frighten every journal that lowers tariff. This new policy of "frightfulness" is in accord with a statement made in Winnipeg a few years ago by the secretary of the Canadian Manufacturers' Association, when he declared the association could, if it wanted, starve the industries of Canada and a large portion of its population to the point of starvation.

Fortunately for Canada, the majority of the manufacturers of this country are not dominated by such a Prussian spirit. They do not believe in the rule of violence advocated by some of their leaders. Moreover, thousands of the smaller manufacturers are learning that the protective tariff is a handicap rather than an advantage to them.

It would be well for those protectionists possessed of the Prussian instinct to remember that the organized farmers have at their command a power of destruction far greater than that possessed by the manufacturers. It is the purchasing power of the farmers of Canada that keeps the bulk of our manufacturing industries in existence. If the organized farmers, driven to desperation by the Prussian attitude of the protectionists, should determine to purchase only foreign-made articles until the tariff is reduced, they would change the tune of some of the junker clique. The organized farmers have this mighty power in their hands, and they are not slaves to be ground down by the Prussian spirit, nor intimidated by the Prussian policy of "frightfulness." If the protectionist junkers think that they own Canada body and soul and can stamp out all opposition to their views, they have made a mistake. They will raise up an equally determined spirit with greater power for reprisal than they have ever dreamed of.

Tractors on Free List

It is announced from Ottawa, on February 8, that the government, by order-in-council, has ordered that gasoline farm tractors, costing less than \$1,400 at the point of shipment, shall remain on the free list until February 7, 1920. Thus the big fight on the tractor tariff has been settled for another year at least. It indicates clearly that there are some members of the Dominion government with backbone enough to stand up for the rights of the farmers. When parliament

Small Manufacturers Crippled

The Effect of the "National Policy" has been to Build Up Big Mergers at the Expense of Smaller Concerns---By R. McKenzie

CANADA has a land area of 3,000,000 square miles, with a population of 8,000,000. That is only slightly over two persons per square mile. Included in this area are hundreds of millions of acres of unused arable land fit to produce food, huge deposits of mineral wealth awaiting development, large tracts of valuable forests, and an immense latent wealth in salt and fresh water fisheries. In addition, nature endowed Canada with a system of water powers to facilitate the development of her resources, such as no other country possesses. With so much natural wealth suggested to her for development for the use of her people, it would seem a sound national policy to bend every energy to utilize these natural resources and to remove any obstacle, natural or artificial, that might be a hindrance to accomplishing that purpose.

Nature has treated us bounteously, has given us a heritage that few countries possess. Can we be justly accused of overlooking and neglecting the benefits of nature while wasting our energies in trying to build a nation by methods which are out of accord with the provisions made by, and the intent of, the Creator who bestowed this huge territory to be the habitation of a virile and progressive people. One would naturally think the settling and populating of these vast agricultural lands to be to make them productive, and the developing of the resources of the mines, forests and fisheries to make this huge reservoir of latent wealth a liquid asset available for the use and needs of the people, would receive the first consideration of our government. The contrary, however, is what has happened.

A Mistaken National Policy

Forty years ago the Canadian government inaugurated a national policy which had for its avowed purpose, not the development of these bounties of nature, but the building up of centres of population by establishing manufacturing industries under the guise of giving employment to labor and affording markets for agricultural products. They attempted to obtain that ideal by surrounding the country with a tariff wall against imports of the necessary material and tools of production for exploiting the natural resources, thus creating an excessive overhead charge on all

industries having to do with the development of our mines, forests and fisheries, as well as all production of wealth from our agricultural lands. This creation of an abnormal overhead charge absolutely interfered with the conversion of these natural resources into liquid assets. In other words, the tribute which natural industries were made to pay the manufacturing industries in urban centres made the development of our natural resources so unprofitable and unproductive that the people who had been brought into the country at great expense of the government were forced into urban centres where living was made more attractive for them.

During the early days of the national policy its blighting effect on the development of industries was not so apparent. Manufacturers, stimulated by customs duties, became numerous. On account of competition with one another they sold their products at competitive prices. Being protected, however, from outside competition they found it to their advantage to amalgamate their interest, thus removing competition from among themselves.

Big Fish Eat Up the Little Ones

Fred W. Field, writing in the *Annual Review of the Monetary Times*, January, 1912, says, "During recent years a new economic factor has made its appearance in Canada, which was brought about by the consummation of a comparatively large number of industrial amalgamations. The number of industrial mergers negotiated from January, 1909, to December 1, 1912, was 58. The aggregate authorized capitalization, including bonds of these mergers, was \$456,935,368. The 58 amalgamations absorbed 948 individual companies."

Mr. Field goes on to say, "the facts and figures above illustrate the growing extensiveness of the tendency to amalgamate. Operations have not been confined to one or a few classes of commodities—sugar, cereal, asbestos, bread, flour, mills, yarn, leather, lumber, cement, dry fish, carriages, links and nails, steel, coal, iron, felt, shoes, fur, paint, jewelry. Arrangements have also

been made between navigation, light and power, breweries, canning, box trade, and other companies. These instances are sufficient to exemplify the widespread nature of the new factor in our commercial and financial progress which is slowly painting a new economic map of the Dominion."

Where the Immigrant Went

Contemporaneous with the adoption of the national policy, the government, at great expense entered into a vigorous immigration policy for the purpose of peopling and rendering productive agricultural lands, especially the vast area of prairie lands west of the Great Lakes, then made accessible by the construction of the C.P.R. Much attention was also given to furnishing labor to develop our forests, mines and other natural resources. According to the annual reports of the Minister of the Interior, 4,272,465 immigrants were brought into the country between the years 1897 and 1915, special attention being given to helping in farmers, farm laborers and mechanics. In fact, during the latter years of the period all but farmers and farm laborers were discouraged from coming to the country.

Special attention was given to the development of the prairie lands. During that period patents were issued for 51,867,000 acres of land in the three prairie provinces to homesteaders. That means over 300,000 farmers on 160-acre farms, yet notwithstanding the fertility of the soil and the facility with which prairie land can be brought under cultivation, due to the overhead cost imposed on production, farming was found so unattractive and unprofitable that large numbers abandoned their farms and found their way to towns and cities where conditions were much more attractive and profitable through the artificial privileges granted to urban industry. To such an extent had this troking of people from the farm to the city taken place that the census of 1911 indicates that only 180,000 farmers occupying 160 acres or over were in the three prairie provinces at that time, and the decrease of the farm population of

the older provinces was even more marked.

Withering Effect of the "National Policy"

An analysis of the postal census of manufacturers for 1910 reveals many interesting facts as to the withering effect the present national policy has on the development of manufacturing establishments in Canada. The census of 1911 gives the number of manufacturing establishments in Canada as 19,215 and the census of 1916 as 21,366 establishments as being in existence in 1916. A closer analysis reveals the further fact that the census of 1911 only took account of establishments employing five hands and over, while 1916 enumerates all establishments including under five hands. The facts are that the number of establishments employing five hands and over in 1916 was only 15,094, as compared with 19,215 in 1911. It is significant that this decrease in the number of establishments was largely in concerns having to do with the finishing of the raw product of our natural resources. For instance, as compared to 1910 there was a decrease of saw-mills and shingle-mills from 3,498 to 1,847 in 1915. Bush, deer and sheep mills decreased from 828 to 681; boat and canoe building establishments from 120 to 83; brick and tile yards from 309 to 182; small saw and grist mills from 1,141 to 644. Other decreases were due to the amalgamation of establishments in the same line of business, such as agricultural implements, from 77 to 58; wooden mills 87 to 52; cotton mills from 26 to 20, and so on. Another most illuminating fact is the reduction of the output of small concerns as between 1910 and 1915. The census bulletin classifies the various industries in eight groups.

Percentage of Establishments, Grouped According to Output

The output of the establishments in each of these groups, and the percentage of the total number of establishments which fell into each one is as follows:

Group	Output	Percentage of total number
1. Under \$25,000	1,847	12.5
2. Over \$25,000 and under \$50,000	1,847	12.5
3. Over \$50,000 and under \$100,000	1,847	12.5
4. Over \$100,000 and under \$250,000	1,847	12.5
5. Over \$250,000 and under \$500,000	1,847	12.5
6. Over \$500,000 and under \$1,000,000	1,847	12.5
7. Over \$1,000,000 and under \$2,500,000	1,847	12.5
8. Over \$2,500,000 and over	1,847	12.5

Reeder, for West Edmonton. Back row, standing, reading from left to right: A. Kite, Bow Accord, for East Edmonton; M. E. Spencer, Edgerton, for Battle River; H. Higginbotham, secretary of U.F.A.; Elmore, Carley, for Medicine; George F. Ross, Wainwright, for Brundage; Joseph MacNeil, Oym, for Red Deer. The new members of the Directorate are: Wainwright, Ross, Greenfield, Huxter, Peterson and Elmore.

Canadian Mission in London

LONDON, England, January 9.—The work of the Canadian Mission in London, up till now, has assumed a three fold form. First and foremost, the question of representation at the Peace conference in Paris, and the lines of policy which shall be adopted by Great Britain and the overseas dominions at the conference, have occupied the minds of our own ministers as well as those of Britain and the other nations within the Empire. Secondly, the Canadian ministers have been very busy conferring with Sir Edward Kemp in connection with the problem of demobilizing, and returning to Canada, the larger portion of our overseas forces, together with their dependants who are resident on this side of the Atlantic ocean. Thirdly and lastly, there has been the important work of the Trade Mission of which Lloyd Harris is the head.

While the activities of the Canadian Mission thus far can be classified into these three divisions, there has been a general participation and understanding by all the members of the mission, in each branch of the work. At the offices of the War Cabinet, No. 2 Whitehall Gardens, with historic ground all around them, the Canadian ministers, the members of the Trade Mission and their respective staffs have been at work since the end of November. Sir Robert Borden, Sir George Foster, Hon. A. L. Sifton and Hon. H. J. Doherty occupy the fourth floor of the War Cabinet offices. On the third and second floors of these offices, L. C. Christie, of the Department of External Affairs, and Colonel O. M. Huggar, of the Department of Militia, at Ottawa, are located, and also Lloyd Harris, F. V. Jones, R. J. Young and Capt. Armstrong, of the Trade Mission. Dr. J. W. Robertson, representing the department of agriculture, shares an office with John W. Dufco who has charge of the Bureau of Public Information attached to the mission. P. M. Draper, the representative of labor, has been spending most of his time outside of Whitehall Gardens, conferring with the British labor leaders. Lieut. Col. Oliver Asselin, of Montreal, who has been in France, joined the Canadian Mission just last week. J. A. Maharg, M.P., Dr. Robert Magill and George Fisher, from Western Canada arrived in London today.

The World's Centre of Activity

The War Cabinet offices, besides housing the Canadians, is also the meeting place for the ministers in the British government. Lord Blandford also has his office in Whitehall Gardens. Large conference rooms are available on every floor, and rarely these days, between

the morning and five in the afternoon, can one of these rooms be secured. At least once a week, Sir Robert Borden has the habit of calling a general meeting of all the members of the mission to discuss problems of Canada's interests, and to express opinion of policy on other of the international problems from the ministerial representative of the Dominion. In the afternoon, Canadian conferees, Sir Robert and his colleagues, are in daily conference with British or other overseas ministers.

Imperial War Cabinet has recently in session, and during Wilson's visit to London two meetings were held, at which ministers were present. The sessions, on historic Christmas Eve, the festivities attending Mr. Wilson, however, interfered very much with the progress of various work in which Canada is in-

gaged for six weeks London has been the world's centre of gravity. All ministers from the overseas have been here constantly. Ministers from the United States (including President Wilson), France, Italy, Roumania, Serbia, Poland, Greece have been in London conferring in various ways on subjects of vital and political importance, or the more changes. The first of the great world's drama of the war has been completed.

Busy Time in the Old City in Preparation for the Peace Conference—By Norman Lambert

With the commencement of the second act which will be seen next week, the stage will be shifted from London to Paris. The U.S. party is in Paris now. The advance guard of the party from Great Britain has also crossed over to the continent. By the beginning of the coming week the entire British contingent of ministers and officials, including the Canadians will have arrived in the French capital to take part in the negotiations which will pave the way to the closing act of the play—the final Peace conference.

Purpose of President Wilson's Visit

Largely as the result of the expressed wishes of President Wilson, while he was in London, the Peace negotiations, commenced at Paris next week, will be developed through three stages, provided, of course, that the important first round will be safely and satisfactorily completed. The purpose of President Wilson's visits in the official centres of the different allied nations during the past month has been to conduct a series of informal conversations with the heads of the governments of each country, bearing upon the broad, general principles to be followed in the Peace settlement. Everywhere, Mr. Wilson has been sounding the unmistakable note of brotherhood amongst all the nations. His idea of a League of Nations has been generally approved by Great Britain, especially by the rank and file of the people whose united voice is to be heard more clearly today than in any other place, amongst the leaders of the labor party. In France, however, Premier Clemenceau some ten days ago devoted a division of opinion on the question of a League of Nations by declaring strongly for the old idea of alliance and a balance of power in Europe. Therefore, the first or preliminary period of the Peace negotiations, which will see Wilson's doctrine tested to the full, promises to be vitally important.

The second step in this international movement toward Peace will be taken when the different allied nations at Paris move from their first or congressional form into their second state which will be more confined and more of a conference. At this second stage, the actual Peace terms will be formulated and expressed in writing. The general decisions of the first gathering or congress will be reduced to a formal document of declarations at the second meeting or conference. Then finally, after the Allies have heard Peace terms, the conference with the Central Powers—Germany, Austria, Turkey and Bulgaria—will be held. And here again the prospect is purely speculative and conditional. The Central Powers at the present moment, together with Russia, present an absolute blank to the opposing allied governments. Not until Germany and the countries round about her, now suffering from the unsettlement of Bolshevik influence, have created within themselves stable governmental administrations, will any Allied Peace Conference be able to make satisfactory terms for establishing finally a decent Peace. The great and serious problem looming up behind all the lesser details of inter-allied differences in viewpoint and opinion is the political chaos of our enemy countries.

Representation at the Peace Conference

One of the very prominent questions to be decided at the Peace congress in Paris next week, is the basis of representation at the Allied Peace Conference which will follow. Canada and the other overseas dominions are particularly involved in this question. So far as the British ministry is concerned, Canada will be given representation at the Peace conference. Sir Robert Borden, at least, has said that much since he arrived in London. But in the eyes of France, Italy and the United States, there may be some disinclination to re-

gard the overseas dominions as separate units, to be given special representation. Great Britain has been the unit in the war in which the overseas dominions have been officially recognized by the other allied nations. These other nations may still feel disposed to regard Great Britain as the representative unit at the Peace conference, in which case the whole problem of the relations of the present component parts of the British Empire would be thrust suddenly into the arena of politics. The British statesmen have seen the possibilities of the issue which may arise between the overseas dominions and the United Kingdom, and their desire now in approaching the preliminary Peace negotiations next week in Paris is that Canada, Australia, New Zealand and South Africa should be given direct representation at the subsequent conference. By the time this letter is in print, Canada's status ought to have been decided.

Demobilization Speeded Up

Much time and work are being given to the demobilization of the Canadian soldiers in England and on the lines of communication in France. The entire Canadian corps, which has been located on the Rhine, is also on the march back to France, and within a few weeks ships will be carrying our men to thousands to the Dominion. The urgency of immediate demobilization has been emphasized by the manifestations of unrest and dissatisfaction even amongst the British soldiers who, this week, approached Downing Street en masse, and demanded that the machinery and operations of demobilization be speeded up.

The Canadian authorities, under the direction of Sir Edward Kemp, have issued today a handbook of instructions and information which will be placed in the hands of every soldier sailing for Canada. It tells the scope and nature of the Canadian plan of demobilization, including references to gratuities and allowances and to the transportation of dependants. The place and function of the Department of Soldiers' Civil Re-establishment are dealt with, and a full account of the scheme to be worked out by the Soldier Settlement Board is given. The handbook also includes a statement of the Dominion's plans and projects of employment, including the location of external credits which are being arranged through the Trade Mission in London. It is also intended to establish through the Khaki University a bureau of information which may facilitate demobilization, and be of service to the men returning to Canada. In short, every precaution is being taken to prevent any extension of the unsettling influences which seem to be working amongst other branches of the army, both here and on the continent.

The Work of the Trade Mission

The securing of trade for Canada out of the war-wrecked countries of Europe and out of the United Kingdom itself is the big job which has been undertaken by the Trade Mission. Lloyd Harris, Mr. Jones and Mr. Young have been devoting most of their time to the interests of Canadian manufactures; while Dr. J. W. Robertson has been representing the interests of Canadian producers and distributors of food. A fifty-million dollar lumber contract with the British government; a million barrels of flour per month for three months, with the promise of extending the period to six months if possible; the promise of the purchase of the entire Canadian cheese output for 1919 by the British government; and the prospect of having a million-dollar cargo of seed wheat, flour and lard placed in Serbia and Roumania, constitute the net results of the business done by the Trade Mission to date. Mr. Harris, Mr. Jones and Mr. Young are in Belgium and France at the present time, and they will not likely return to England until ten days or two weeks from this date.

Out of the Peace congress will develop doubtless new international bodies which shall take charge of the business of supplying the needy nations of Europe with food, clothing,

Rotations for the Mixed Farm

Cattle Grazing in a Mixed Farming District in Central Africa

One, Including Green Feed for Ensilage, Recommended for Districts Where Corn is Uncertain—By G. H. Hutton, B.S.A.

ROTATION "O":—

- 1st Year—Hoed crop.
- 2nd Year—Wheat.
- 3rd Year—Oats.
- 4th Year—Summerfallow.
- 5th Year—Barley (seeded down).
- 6th Year—Hay.
- 7th Year—Pasture.

Objections of These Rotations

The rotation first named, known as Rotation "L," has been modified slightly at the Lacombe Experimental Farm, and is now operated on a block of 240 acres and is known as the "Mixed Farm Rotation." The chief objection to the rotation as it is shown above will be pointed out when considering the modifications that have been introduced.

In discussing Rotation "K" the objections already raised to the growing of hoed crops on a large scale obtain. Where corn is a doubtful crop, as it is over a very large proportion of the West, particularly those areas adapted to mixed farming, no other hoed crop is practical. No one would think of having a sixth of their farm in roots or hoed crop other than corn.

The objections to Rotation "O" would be the fact that it calls for one-seventh of the land in hoed crop and also that one-seventh of the land is annually in summerfallow. For areas such as this where soil and rainfall compare on an equal basis a complete summerfallow provides too much free fertility and stores sufficient moisture to produce a tremendous growth of straw, with the result that the crop invariably lodges, does not dry well and ripens irregularly. It is admitted that a better crop following summerfallow than barley could be selected, but no matter what cereal is sown the crop will lodge nine years out of ten.

A Rotation With Many Advantages

Rotation modifications as introduced in Rotation "L" are as follows:—

- 1st Year—Hay. Manure 12 tons per acre.
- 2nd Year—Pasture.
- 3rd Year—Pasture. Plow six inches deep July or August, pack, cultivate and fall cultivate thoroughly.

4th Year—Oats or Oats and Peas, for ensilage.

5th Year—Oats.

6th Year—Barley, seeded down, Timothy and alsike clover.

At the Lacombe Experimental Farm, as already stated, this rotation covers about 240 acres of land, and from the 60-acre field seeded to green feed we have this year filled one also 12x20, one 16x30, and had sufficient crop on the field to have filled a third also as large as the largest of those in use. The daily consumption per head for dairy cattle, where the silage constitutes the chief part of the ration, runs only from 40 to 45 pounds. Silage from eight to ten tons are taken from each acre the stock carrying capacity of the land is readily seen to be tremendously increased, as from two to two-and-a-half head of mature animals to the acre can be comfortably carried through the winter.

This rotation has several distinct advantages, particularly for those areas where well-tilled summerfallows result in too great a growth of straw the following year. The full cultivation given the summer plowed and is sufficient to produce a maximum crop without carrying so much fertility and moisture as to cause the crop to lodge seriously.

Application of Manure Beneficial

The application of farm-yard manure at the rate of 12 tons per acre maintains soil fertility while the plowing under of the soil once in six years adds not only to the soil. One advantage in connection with the application of manure on the soil consists in the fact that during the rainy season weed seeds contained in the manure germinate, but fail to develop for the reason that the small particles of manure soon dry out and the young plants are destroyed.

There being but one year of the rotation in hay a maximum crop results; the application of the manure on the soil induces a free growth of grass for pasture, both the year the application is made and the one immediately following.

Considered as to the value of the ru-

tion for the three years in grass, it will be evident that maximum returns are secured from the land each year while it is seeded down. As has already been pointed out, the year following the breaking of the soil also has produced a maximum crop every year the rotation has been under way, and if good cultivation is given land under this system the fifth and sixth years, also produce satisfactory results.

We have yet to find a more satisfactory catch of grass with barley as a nurse crop seeded in this rotation, and each year we have been able to notice an improvement in the crops grown even though the life of the rotation is only well begun and the ultimate beneficial effects will follow in future years.

Yield of Field Crops

The Dominion Bureau of Statistics estimates the yield and value of the principal field crops of Canada for the season of 1918, as compared with 1917, as follows:—

The total yield of wheat for Canada in 1918 is returned as 180,501,360 bushels from 17,353,902 acres, an average yield per acre of 11 bushels. In 1917 the corresponding figures were 238,742,850 bushels from 14,758,850 acres, a yield per acre of 16 bushels. The yield of oats in 1918 was 360,373,500 bushels from 14,790,325 acres, an average of 24 bushels per acre, as compared with 400,000,000 bushels from 15,318,400 acres in 1917, an average of 26 bushels per acre. Of the remaining grain crops the total yields in 1918, with the figures for 1917 in brackets, were in bushels, as follows: Barley, 77,290,240 (55,057,799); rye, 8,496,790 (3,857,200); peas, 3,112,100 (3,526,346); beans, 3,568,580 (1,274,000); buckwheat, 11,425,500 (7,138,400); flax, 5,972,290 (5,924,900); mixed grains, 35,730,300 (36,157,000); corn for feeding, 18,214,700 (7,762,700); potatoes, 204,511,700 (78,002,000); turnips, etc., 180,000,000 (63,431,000); hay and clover, 14,041,600 tons (13,054,700); fodder corn, 4,776,000 tons (2,690,370); sugar beets 180,000 tons (117,000); alfalfa, 445,000 tons (263,400). The average yields per acre of these crops with last year's averages in brackets were in bushels as follows: Barley, 24 (25); rye, 16 (18); peas, 13 (14); beans, 14 (13); buckwheat, 20 (18); flax, 54 (51); mixed grains, 381 (323); corn for feeding, 60 (30); potatoes, 143 (124); turnips, etc., 26 (27) (200); hay and clover, 1.40 ton (1.60); fodder corn, 31 tons (7.34); sugar beets, 10 (4.40); alfalfa, 94 tons (2.30).

The total yields in the three principal provinces in 1918 were: Wheat, 164,498,100 bushels as compared with 211,953,100 bushels in 1917; oats, 322,000,000 bushels as against 254,877,200 bushels; barley, 67,607,400 bushels as against 90,834,100 bushels; and flax, 5,776,000 bushels as against 5,835,900 bushels.

THE systematic planning of crops in the rotation of many of the most pressing farm problems, such as the maintenance of fertility, the retention in the soil of sufficient root fibre to prevent blowing, and the distribution of labor over the various seasons of the year. Such systematic arrangement is still lacking on a great number of western farms, even where livestock constitute one of the principal sources of revenue. One of the reasons for this situation consists in the expense connected with forcing the farm into the requisite number of fields. Another reason is that it has been a custom to think of rotations as necessarily involving the growing of roots or corn. Since corn is a practical crop over a relatively small section of the West where mixed farming is most generally practiced, and since the growing of roots on such a scale as would be necessary is prohibitive owing to the high cost of labor and the difficulty of housing, the rotation scheme has at once been set aside by many farmers.

Green Feed for Ensilage a New Factor

The fact that within the last half-dozen years the growing of oats alone or peas and oats down together, for use as ensilage, has been successful, puts an entirely different light on this phase of agriculture. While the objection may be raised that the growing of green feed does not clean the land to the same extent as is done where corn or rye is raised, yet the growing of green feed for ensilage does clean the land to some extent, since two or three crops of weeds may be destroyed before the crop for ensilage is sown. It is a thoroughly practical crop, providing silage that is at once highly palatable and nutritious, and is bound to come into more general use each year. It readily forms a part of any rotation and is more economically produced than roots and much safer than corn since there is no area where its culture can be called into question because of climatic conditions.

Suitable Rotations for Mixed Farming
Among the rotations which are at all suitable where mixed farming is practiced are the following:—

ROTATION "L":—

- 1st Year—Hay.
- 2nd Year—Pasture. Manure 12 tons per acre.
- 3rd Year—Pasture.
- 4th Year—Wheat.
- 5th Year—Oats.
- 6th Year—Barley, seeded down to Timothy, alsike and red clover.

ROTATION "K":—

- 1st Year—Hoed crop.
- 2nd Year—Wheat.
- 3rd Year—Barley, seeded down.
- 4th Year—Hay. Manure 12 tons per acre.
- 5th Year—Pasture.
- 6th Year—Pasture.

A Sample of the 1918 Crop on the Farm of G. H. Hutton, near Edmonton, Alta.

An American Farmers' Movement

Article I.

THE Farmers' Educational and Co-operative Union of America resembles the farmers' organizations of Western Canada. It exists for the same general purpose—to make rural life full, free and satisfying. The very first step in bringing about an attractive rural life is to make farming profitable. Naturally, therefore, the major efforts of the Farmers' Union have been directed toward establishing a system of co-operative selling, to guarantee farmers a larger and fairer share of the final selling price of their products, and a system of co-operative buying to eliminate the exorbitant profits of the middlemen. This organization also has been active in promoting better rural schools, working for good laws and good government—though not in a partisan political way—and in improving rural social conditions.

The first local of the Farmers' Union was organized in the state of Texas, on September 2, 1902, by a group of cotton growers. At the outset it was a cotton growers' movement. The cotton producing industry was in a deplorable condition. Many farmers had to mortgage their growing crop from year to year to buy supplies. When the crop was made, creditors demanded payment. This forced a large volume of cotton on to the market every year soon after harvest and enabled speculators to secure it at ridiculously low prices.

Conditions were ripe in the South for a movement to shake off the credit system and loosen the grip of the cotton speculators. Hence, the new organization spread very rapidly, not only in Texas, but in other states as well. The men who founded the Farmers' Union made plans for a national organization, and for a state organization in each state having 5,000 or more male members. Within three years after the first local was formed, state organizations had been established in seven states. Delegates from these seven states met in Texarkana, Texas, on December 3, 1903, and organized the national Farmers' Union. State organizations now exist in 25 states.

The National Organization and Its Work

The national organization of the Farmers' Union conducts no business enterprises and is now mainly concerned with extending the Union into states not yet organized and with watching affairs at the national capital to see that bad legislation is defeated and good legislation enacted. In national legislation the Farmers' Union has been a potent factor. Last year the president of the National Union was a member of the commission appointed by the government to fix the price of wheat.

A national convention is held each year. State organizations are entitled to one delegate for each 5,000 male members or major fraction thereof. The national convention deals with national phases of marketing and legislation, mainly by resolutions, and serves as a sort of clearing house for ideas and experiences. Officers of the National Union are a president, vice-president, secretary—treasurer and a board of five directors, all elected for a year at a time.

The founders of the Farmers' Union obviously intended that the national organization should play a much larger part in marketing farm products than it is playing. They seem to have had in mind concerted action by farmers to hold their cotton for a price

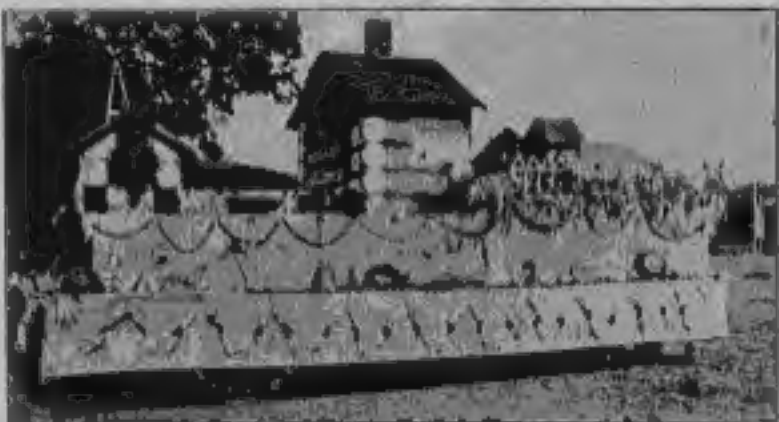

Aims and Activities of the Farmers' Educational and Co-operative Union of America—By L. S. Herron

agreed upon by the national convention. Cotton warehouses were proposed so that farmers might store their cotton and secure funds for bill paying upon warehouse receipts as collateral. There were attempts even to restrict the acreage of cotton to curtail the supply and increase the price. Indeed, co-operation to fix prices seems to have been emphasized more than co-operation to reduce the cost of distribution.

But the idea of trying to fix prices as farm products and holding for those

general idea of the state and local activities of the organization.

The first local of the Farmers' Union in Nebraska was organized in the spring of 1911. Growth was slow at first. Farmers who had seen the rise and decline of the Grange and the Farmers' Alliance were not easily persuaded that farmers would "hang together." But by December, 1913, the requisite number of members had been secured to form a state organization, which was accomplished on the 24th and 18th of that

Food, measured on an auto, at a Farmers' Union in Nebraska.

prices has lost ground. In the northern states, where farming is more diversified, it never has been so popular as it was in the South. The present marketing activity of the Farmers' Union is more in the direction of removing the obstructions which prevent the free operation of the natural law of supply and demand. Co-operative marketing machinery is being set up that will secure to farmers the largest possible part of the price of their produce in the ultimate markets.

Functions of State Organizations

Each state organization of the Farmers' Union is autonomous, and, so far as its internal affairs are concerned, is independent of the national organization. The business enterprises of the Farmers' Union are all either local or under the jurisdiction of the state organizations. To understand the work being done by the Farmers' Union, therefore, it is necessary to study the activities within a state. The different states do not all work along the same lines, but to describe what is being done in Nebraska will give at least a

month in a convention held in Fremont, Nebraska. The state organization is incorporated under the name "Farmers' Educational and Co-operative State Union of Nebraska."

Local Unions the Units of Organization

As previously suggested, the smallest unit of the Farmers' Union is the local. In Nebraska, these meet in country school-houses, country halls and in the villages. A local may be formed with only 15 members, but some of the strongest ones in Nebraska have 100 and more members. Men and women are admitted on an equality, except that women do not pay dues. When the Union was started an elaborate ritual was prepared, and there were passwords and a grip. The national convention in 1917 abolished the ritual. Where any attempt is made to hold secret meetings, members now are admitted by card. Secrecy is not insisted upon as much as formerly.

Most of the locals meet twice a month. A common plan is to hold business meetings and social meetings alternately. Social meetings usually consist of some

form of literary program, in which the women and young people take part. Often refreshments are served at the close of the program, and the meeting ends in a general social good time. From many quarters comes testimony that these meetings are of great value in knitting the people of the community together. Most of the locals, however, have difficulty maintaining good social meetings, and this is one of the problems of the organization.

Co-operative Purchasing by Locals

At business meetings the business matters of the local are considered. Frequently this consists of taking orders for goods to be purchased by the secretary or business agent. A very early development in a community where a number of locals have been organized is the formation of a company, with a place of business in town and a manager to do the buying and selling. This reduces the amount of business done through the locals, and has a tendency to reduce the size and regularity of the meetings.

When a county has five locals a county organization may be formed. Membership in the county organization is optional with the locals, but usually they all join. The county convention, composed of delegates from the locals, meets four times a year. County Unions deal with the larger problems of the community. Some of the questions in which county organizations in Nebraska have interested themselves are roads and bridges, schools and efficiency in county government.

State Conventions Held Yearly

The state organization meets in convention once a year. Each local and each county organization is entitled to one delegate. In Nebraska, the state convention elects a president and a vice-president, each for one year, and a board of seven directors. The directors are chosen from districts for terms of three years. General management of the State Union and all of its enterprises and activities is vested in the board of directors. The state president is a sort of general manager and devotes his entire time to the work.

Other state executive officers are the state secretary-treasurer and the superintendent of field work. Both are employed by the board of directors. The secretary-treasurer keeps the records and is custodian of the state funds. The superintendent of field work and his assistants organize new locals, help in the organization of Farmers' Union companies and associations, speak at special meetings and picnics and do general missionary and propaganda work.

Besides deciding upon policies for Union work, the state convention, by resolutions and the adoption of committee reports, gives its regard to the legislation desired by the Farmers' Union. A legislative committee, consisting of one representative from each county having one local or more, pushes this legislative program, and, in emergencies, meets between conventions to decide upon actions to take. This committee looks to the employment of a person to represent the State Union at the capital when the legislature is in session and to lobby for its measures.

Partisan Politics Avoided

The Farmers' Union does not go into politics in the sense of nominating candidates for the legislature or other public offices, or in the sense of making a campaign for friendly candidates. Two years ago a list

One of the warehouses owned and operated by organized farmers in Nebraska.

210. The first part of the question is about the
d. e. r. al. al. al. al. al. al. al. al. al. al.

Whereas we believe that this period of our country's history which our people are now passing will call for more than the usual aid and assistance in the solution of many of our problems, the national spirit of our people's past will lead them to freedom in the new era of the future which we have before us.

And, indeed, it is my intention that the present meeting will be the last of the first part in as much as I will limited by the calendar of the year to a total of two more annual meetings of the "little" business group in the course of the coming year.

However, for the reason that I am still an adherent to the belief that the group is justified in the inclusion of the business group in the Forum, I am planning to call another meeting in the future.

4. **1918-1919** — **എറണാകുളം** മിഷനറിസ്.

AUTHORITY REPORT TO SHAREHOLDERS

We have compared the above Balance Sheet with the books and accounts at the First Office of The Dominion Bank and the certified figures received from its Branches, and after checking the cash and verifying the securities at the Third Office and section of the main office Branches on December 31st 1918, we certify that in our opinion, such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of my information, the explanations given to me and as shown in the books of the Bank.

[illegible]

All information and explanations required have been given to the credit of the participants of the Bank which operates under our system. In our opinion, there is still the power of the Bank.

Abstracts Book Panel

There is a small, but significant, difference in the way that the two groups of students perceive the importance of the various components of the curriculum. The students in the control group perceived the importance of the various components of the curriculum in a more uniform manner, while the students in the experimental group perceived the importance of the various components of the curriculum in a more varied manner.

"What the Farmer can do with Concrete" is not a book to while away an idle hour. It's a book not so much for reading as for gaining useful knowledge—

Knowledge that you can turn to profitable use in the building of such Concrete structures as your farm needs most.

Concrete—the material that has everything to recommend it for farm buildings—is fortunately a material that lends itself to successful construction without the need of skilled labor. The book of ours explains how, with your own two hands, you can build most of the things of concrete which your farm needs.

Whether your problem involves a barn or a house, a silo, or a feeding rack, a tank, a water trough, any structure you can think of, concrete represents a material that is sturdy, durable, and economical. It is the material that is the answer to the farmer's problem of building a structure that will last for years.

DE LAVAL CREAM SEPARATOR

If you have any use for a cream separator it's only a question of time before you buy a De Laval.

Many buy a De Laval to start with and so avoid a lot of "second-hand" trouble.

They buy a De Laval because they have seen it in operation and know that it is the best in the world.

They buy a De Laval because they have seen it in operation and know that it is the best in the world.

Claims don't mean much to such farmers. They've had lots of separator experience. "Performance" means a thousand times more to them than claims.

They've watched the De Laval perform for several decades. They've seen it in operation and know that it is the best in the world.

When you buy a De Laval you are buying the best in the world.

When you buy a De Laval you are buying the best in the world.

**KEEP YOUR HORSES
AT
WORK**

The pulling power of your horses depends on the harness they wear. That's why the harness is the most important piece of equipment in a horse's stable. It's the key to getting the most out of your horse's strength and endurance.

1. *What is the purpose of the study?*
 2. *What are the research objectives?*
 3. *What is the research design?*
 4. *What are the variables?*
 5. *What is the sample size?*
 6. *What are the data sources?*
 7. *What are the data collection methods?*
 8. *What are the data analysis methods?*
 9. *What are the results?*
 10. *What are the conclusions?*
 11. *What are the limitations?*
 12. *What are the recommendations?*

[illegible]

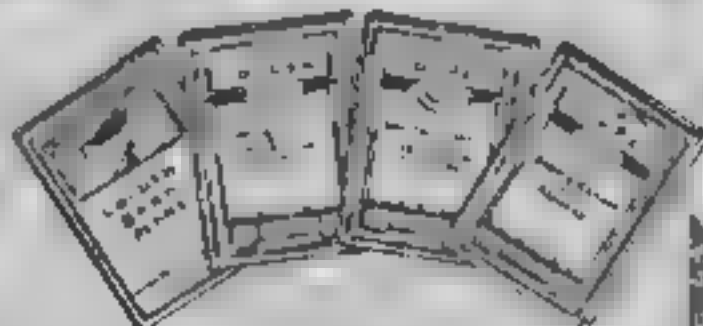

Figure 1 consists of four grayscale images arranged in a 2x2 grid. The top row is labeled 'a = 0.0000' and the bottom row is labeled 'a = 0.0001'. The left column is labeled 'b = 0.0000' and the right column is labeled 'b = 0.0001'. The images show a transition from a dark, noisy background to a lighter, more structured pattern as 'a' and 'b' increase.

1990

... ..

11. *Chlorophyll a* and *Chlorophyll b* are the two main photosynthetic pigments in green plants. They are responsible for the green color of leaves. Chlorophyll a is the primary pigment, and chlorophyll b is an accessory pigment. They both absorb light energy and transfer it to the reaction center where photosynthesis takes place.

Table 11 shows the results of the regression analysis. The results indicate that the model is statistically significant at the 0.05 level, and the adjusted R-squared value is 0.85, indicating a good fit of the model to the data. The regression coefficients for the independent variables are as follows:

STANDARD FORMALDEHYDE

FOR DESTROYING SMUT

**Kill the Smut -
Increase the Yield**

More than one bushel of grain is lost every year because of smut. You plant that seed and you get that yield every bushel of grain it can produce. The country needs it—the whole world depends upon it—and it will pay you well.

Before you plant, treat your seed with

STANDARD FORMALDEHYDE

to kill all chance of SMUT. It costs so little and it means so much that every live, wide-awake farmer will insure against smut and great crop losses.

Get your order in early so that you may be sure of getting "Standard" when you need it.

Sold in sealed 2-lb., 5-lb., 10-lb. or in bulk quantities as the labels also in bulk.

Formaldehyde is a gas and is not harmful, except when used in bulk.

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: a control group and an experimental group. The control group received a standard treatment, while the experimental group received a treatment with a specific intervention. The results were then compared between the two groups.

404 李國治

Figure 1 illustrates the experimental setup. A subject (S) is seated at a table, viewing a video screen (V) through a camera (C). The screen displays a target (T) and a starting point (S). The subject's hand is positioned at the starting point. The diagram is labeled with 'S' for subject, 'C' for camera, and 'V' for video screen. The starting point is labeled 'S' and the target is labeled 'T'.

ENTRÉE ET DÉPARTS

[illegible]

Pauline Hanson and the ABC election

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (n = 10) and the experimental group (n = 10). The control group received a standard training protocol, while the experimental group received a modified training protocol. The results of the training protocol are shown in the bar chart. The y-axis represents the percentage of correct responses, and the x-axis represents the number of trials. The control group shows a higher percentage of correct responses compared to the experimental group.

The Price of Wheat

What Will the 1919 Crop be Worth?

Argentine and Australia have surplus stocks of wheat and with Canadian wheat will have to be sold in open competition with this grain. In looking into the future and in this connection several things should be noted. The actual amount received per bushel of the harvest is not the only factor to be considered in the marketing of wheat. It is only one factor in the deciding factor.

It can be done at this time that it can be done that will help the wheat grower. It is not a question of whether it can be done or not, but of whether it will be done. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years.

It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years.

It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years.

It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years. It is a question of whether it will be done in the next few years.

Great Canadians

Coler, Wilson and Pope—Prince Edward Islanders—By D.C. Harvey

compelled his withdrawal from politics. He was one of the "Fathers of Confederation" and looked forward to the time when Canadians would get the "Sovereignty" of the British Empire.

they refused to call attention to their poverty of day. Seventy years later, when the day of the Island was still held by those of the "winning" side.

and the people of the Island were still held by those of the "winning" side.

which was the result of the "winning" side.

of the popular imagination and poverty and contradiction. "The tenant has no security against the rapacity of the landlord."

Music a Real Necessity in Time of War

Music has justified itself as a factor of real service in this hour of trial. Not only to the hum at the front do there come times of loneliness and burden. They need the inspiration, the encouragement, the soul-satisfying comfort of music in the home.

The NEW EDISON

"The Photograph with a Soul"

Re-creates the human voice and the human-played instruments with such fidelity that the difference between the instruments cannot be distinguished. The Re-Creation of the Human Voice and the Human-Played Instruments is a new and revolutionary concept in the field of sound reproduction. It is the only system that can reproduce the human voice and the human-played instruments with such fidelity that the difference between the instruments cannot be distinguished. Farm Women's Clubs

These Are Busy Women

On Various of Problems

One of the most important factors in the development of the farm community is the organization of the farm women. These women are busy, but they are not idle. They are working for the betterment of their homes and their communities. They are working for the education of their children and for the improvement of their own lives. They are working for the betterment of the farm community as a whole.

Plans for Club Work

The first step in the organization of a farm women's club is the selection of a leader. This leader should be a woman who is interested in the work and who has the ability to lead. The next step is the selection of members. These members should be women who live on the farm and who are interested in the work. The third step is the selection of a meeting place. This place should be a place where the women can meet and work together.

Join

The fourth step is the selection of a program of work. This program should be a program that is of interest to the women and that will help them to improve their lives. The fifth step is the selection of a budget. This budget should be a budget that is realistic and that will allow the club to carry out its program of work.

Practical Work

The sixth step is the selection of a time for the club to meet. This time should be a time when the women are free to meet and work together. The seventh step is the selection of a place for the club to meet. This place should be a place where the women can meet and work together.

The eighth step is the selection of a program of work. This program should be a program that is of interest to the women and that will help them to improve their lives. The ninth step is the selection of a budget. This budget should be a budget that is realistic and that will allow the club to carry out its program of work.

Practical Work

The tenth step is the selection of a time for the club to meet. This time should be a time when the women are free to meet and work together. The eleventh step is the selection of a place for the club to meet. This place should be a place where the women can meet and work together.

The twelfth step is the selection of a program of work. This program should be a program that is of interest to the women and that will help them to improve their lives. The thirteenth step is the selection of a budget. This budget should be a budget that is realistic and that will allow the club to carry out its program of work.

Practical Work

The fourteenth step is the selection of a time for the club to meet. This time should be a time when the women are free to meet and work together. The fifteenth step is the selection of a place for the club to meet. This place should be a place where the women can meet and work together.

The sixteenth step is the selection of a program of work. This program should be a program that is of interest to the women and that will help them to improve their lives. The seventeenth step is the selection of a budget. This budget should be a budget that is realistic and that will allow the club to carry out its program of work.

Board of Directors

The eighteenth step is the selection of a time for the club to meet. This time should be a time when the women are free to meet and work together. The nineteenth step is the selection of a place for the club to meet. This place should be a place where the women can meet and work together.

THE FARM WOMEN'S CLUB

... (text continues) ...

The twentieth step is the selection of a program of work. This program should be a program that is of interest to the women and that will help them to improve their lives. The twenty-first step is the selection of a budget. This budget should be a budget that is realistic and that will allow the club to carry out its program of work.

Practical Work

The twenty-second step is the selection of a time for the club to meet. This time should be a time when the women are free to meet and work together. The twenty-third step is the selection of a place for the club to meet. This place should be a place where the women can meet and work together.

Practical Work

The twenty-fourth step is the selection of a program of work. This program should be a program that is of interest to the women and that will help them to improve their lives. The twenty-fifth step is the selection of a budget. This budget should be a budget that is realistic and that will allow the club to carry out its program of work.

The Farmers' Market

Office of the United Grain Growers Limited, Winnipeg, February 8, 1919.

WHEAT—There have been only minor changes in prices during the past week. Some slight advances have been made, but no real big reactions such as might have been expected after such an extended period of weakness. American markets have shown considerable strength in their cash prices, but this is not only a temporary recovery, and does not affect the current future prices. In all respects the situation in wheat remains unchanged since a week ago.

BARLEY—Offerings have been somewhat heavier, and have depressed prices. In a general way the market continues to be influenced by changes in other cereals.

FLAX—There was a bulge in prices during the early part of the week, due to a good cash demand, and unfavorable conditions in the Argentine. Later on, however, there has developed only a slight recovery in prices, and they are now about the same as a week ago.

Other big sales are being reported from different parts of the country, with Alberta throughout the fall favored.

FREE TREES FOR FARMERS

FOR PLANTING WIND-BREAKS ON PRAIRIE FARMS
Distributed by the Government of Canada

ANY FARMER living in Manitoba, Saskatchewan or Alberta, can procure, **FREE OF CHARGE**, enough seedlings and cuttings of hardy forest trees to establish a good shelter-belt around his farm buildings and garden.

Over 84,000 successful plantations have been established as a result of this distribution.

Over 45,000,000 trees have been given away free.
Over 5,000,000 trees will go out this spring.

Superintendent's Residence on Highway Station at Indian Head, 1910.

Same Place Nine Years Later

A successfully-grown wind-break in connection with the buildings is the best investment a farmer can make. Trees will make your farm more home-like.

To obtain free trees to plant in the Spring of 1920 your application must be received before March 1, 1919.

ALL APPLICATIONS AND ENQUIRIES SHOULD BE ADDRESSED TO:—

NORMAN M. ROSS

Nursery Station

INDIAN HEAD, SASK.

The Famous Garden City Feeder

Has done more to take the hardship out of threshing and make it a pleasure than any piece of machinery on the farm.

BECAUSE it feeds a threshing machine as it should be fed, regardless of the antics of ignorant or mean pitchers. No more swearing at them. Let them pile the sheaves on any way they please, and as fast as they want to, the Garden City Feeder will deliver the grain and straw to the cylinder, in an even flow of uniform depth. No more broken spikes or clogged cylinder, no more overloaded straw racks or sieves; no clogged blower; no broken or burned belts; no wasted grain; no long waits for repairs. Just a steady run all day, every day, season after season. It's fun to thresh that way, and profitable too. Don't take our word for it, ask any user, or let us prove it to you.

SATISFACTION GUARANTEED

A Powerful Tractor at a Reasonable Price

THE big demand for a well-built, powerful tractor, which would perform consistently and yet could be sold for a reasonable price guided us in designing this tractor masterpiece. It created the Port Huron which has proven such a tractor sensation. Built by a firm that knows what the farmer wants and knows how to build it. It is not a freak tractor but is constructed along the lines which have proven the most efficient in actual tractor field and belt work.

The Port Huron

Is a kerosene burning tractor with a 12 H.P. draw bar, and a 25 belt H.P. Has a powerful Friction Drive with forward and reverse speeds. Powerful Transmission with the gears all included and running in an oil bath. You have only to study the Port Huron specifications to realize that quality and strength are built into every inch of it.

You can't afford to buy a Tractor until you have seen the Port Huron and when you have seen it the chances are a hundred to one, it is the Tractor you will buy. Send for complete descriptive folder.

A WORD TO THE WISE!

The condition of your stock in the Spring depends on one thing and one thing only—the amount of nourishment they can extract from the food you feed them during the Winter months.

Stock barned up and deprived of their natural requirements—green feed and exercise—often go off their feed altogether, and lose condition rapidly, if the proper tonic is not given them regularly to keep the appetite, stimulate the digestive organs and help them assimilate the food they eat.

Remember! No matter how expensive feed you give your stock they will not thrive nor give the productive results they should during the Winter months without a digestion-promoting tonic. It is not the amount of food an animal consumes that builds up the system, but only the amount of food the digestive organs assimilate and convert into blood, bone and flesh.

Follow the example of thousands of stock breeders and farmers—feed

INTERNATIONAL STOCK FOOD TONIC

*It costs little--3 feeds for 1 cent. It does much--Keeps
your Stock Sleek, Healthy and Robust.*

FOR HORSES—You know the likelihood of horses becoming out of condition, unthrifty, sluggish in appearance, rough, hide-bound, dry and dead coats, stooped in limbs, etc. **INTERNATIONAL STOCK FOOD TONIC** will quickly enable the animal's system to throw off these ailments. Your horses need a preparation just like this during the Winter—something to help them keep the digestive organs working properly, purify the blood, etc., and remember the cost to use is remarkably small—**LESS THAN THREE FEEDS FOR ONE CENT.**

FOR HOGS—**INTERNATIONAL STOCK FOOD TONIC** is composed in concentrated form of herbs, roots and minerals, etc., which substitute to a large extent the ingredients hogs obtain when rooting about on free range. Its use saves waste that occurs in Winter through imperfect digestion and diverts the feed to its proper body parts and organs. It gives hogs a keen appetite and strengthens the flow of digestive juices. It keeps the system toned up and in a clean, healthy condition and free from worms. Its use will save you thirty days in preparing hogs for market.

FOR COWS—**INTERNATIONAL STOCK FOOD TONIC** is rated one of the best preparations ever made for every day feeding to dairy cows and fattening cattle. It is composed of the best known ingredients that assist the body organs to perform perfect assimilation, which is the secret of milk making and fattening. By feeding as directed it will increase the quantity of milk and keep your cows in a toned-up, healthy condition, and give them an extra relish for their feed.

READ THESE TESTIMONIALS

Fine For Cows

Ballwin, Minn.
Dear Sir—I am very pleased with the International Stock Food. All my horses, mares and colts are looking fine, their young colts and calves. It is fine stuff for milking cows.

Yours truly, H. T. Pascoe.

Name Equal To It

Stokow, Alta.
Dear Sir—I have used plenty of your valuable International Stock Food Tonic, and it is great. There is no other equal to it.

Yours truly, John Seaton.

Would Not Be Without It

Granton, Alta.
Dear Sir—Since using International Stock Food Tonic, my stock is better than ever before. I have worked my horses harder on less feed. I would not be without it.

Yours truly, H. B. Nisal.

The chief reason why you should use **INTERNATIONAL STOCK FOOD TONIC** in your Winter feeding is—**It pays.**

For Sale by Dealers everywhere in convenient-sized packages, or in 25 lb. pails at 25.75 each.
